

FIDDDES AUSTRALIA

HARD WAX OIL CARE AND MAINTENANCE

Hard Wax Oil is a blend of natural oils and waxes offering exceptional durability and resistance for internal timber surfaces and flooring. It penetrates into the timber enhancing its grain and making it appear warmer and more natural than other coating systems. It is a low maintenance, highly durable, water resistant finish that won't peel, flake or crack. Its durability and high stain resistance make it ideal in areas subject to a high degree of wear or exposed to liquids that can normally stain a timber surface. It is toy and child safe to EN71 (when dry) and is an environmentally friendly alternative.

Hard Wax Oil is easily maintained and rejuvenated when required. No future sanding is needed as it is a replenishable coating system designed to be easily spot repaired without leaving repair marks. The coating is quick drying meaning any future maintenance coats can be applied and the timber walked on within a few hours. Ongoing maintenance will depend on the treatment so to extend the life of your coating it is important to remove dirt and grit as it can cause fine scratching and wear on your floor. We recommend a broom or electrostatic mop or if using a vacuum cleaner please ensure the head will not scratch the coating. As with any coating system, the regular removal of dirt and grit is the key to your floors protection and longevity. We also recommend only mopping as required. Please also ensure all mobile furniture such as chairs have adequate protection to eliminate any unnecessary premature wearing.

For care and maintenance of your hard wax oil timber surface we recommend using Fiddes Australia After Care products. **Under no circumstance use bleach, ammonia or caustic based cleaners.** These products will strip or weaken the coating and could cause colour distortion and reduce the durability and stain resistance.
